Farley Printing Company installs new Heidelberg Printmaster 46 and Shanklin Automated Shrinktunnel

The PM46 was installed to assist with Farley Printing Company with short run quick turn projects. Additionally, with the envelope feeder we are able to continue to offer superior quality envelopes on a cost effective and quick turn basis.

The Shanklin Shrinktunnel allows for high speed, high volume shrink wrapping projects. With the ability to shrink up to 1200 packs/per hour, Farley Printing Company can handle a wide range of shrink wrapping projects.
